Name:

C2: Plato

Message:

Description:

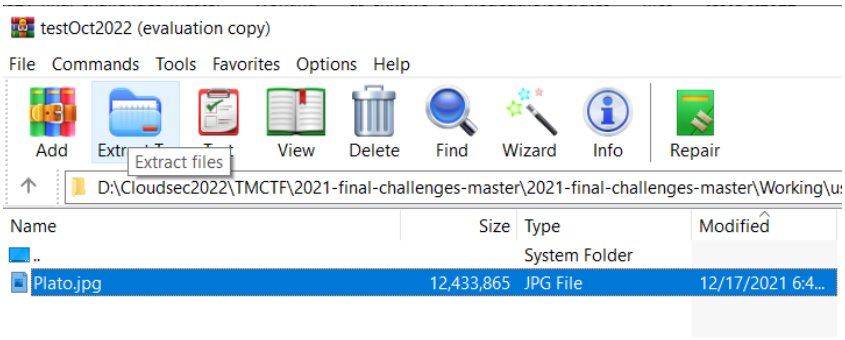

This is a forensics-based challenge, meant to reassemble your mind in the world of Socrates. As you examine this challenge, remember to look inwards, as introspection is often the only way forward.

Details:

You are given a Plato.jpg file and you are tasked to uncover what's inside of this image. This is a precious painting that requires encryption to preserve its authenticity.

Instructions:

- se winrar to extract the archived file inside this image. Use "man" password to extract.

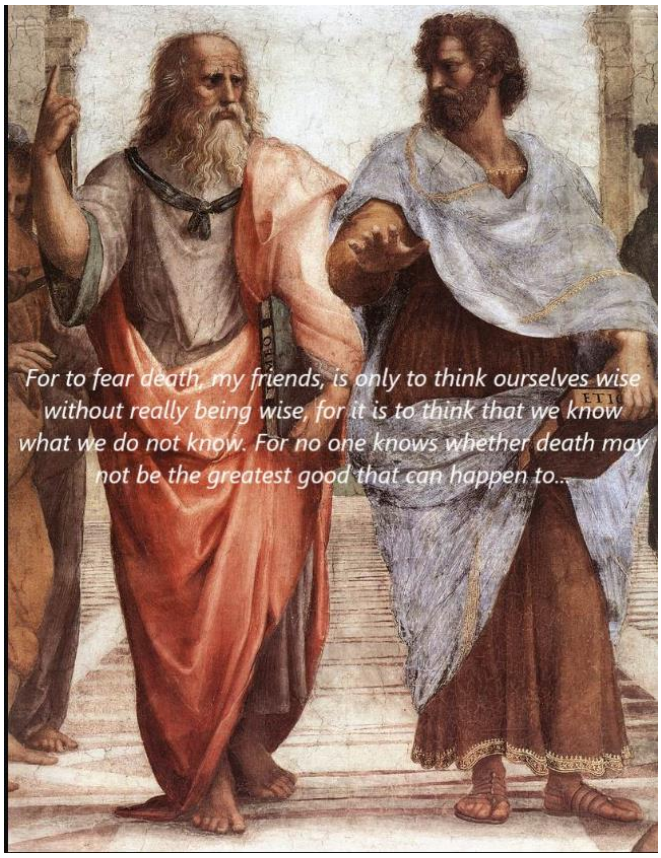

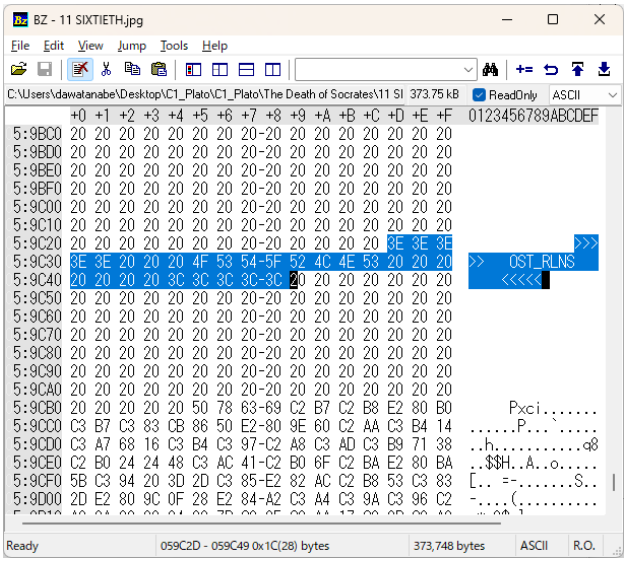

Fig. the quote message is missing “man”.

- There are 12 photos in the folder and needs to assemble

The pictures are numbered, but this is not the 'correct' order. You must visually inspect each, and reassemble, from left-to-right, top-to-bottom, The Death of Socrates painting. 4 across, 3 down, making 12 images.

- Each photo has encrypted text, players must decrypt each. After all are decrypted – merge it.

When they are in this order, you can inspect the individual file to find they contain a segment of the enciphered flag.

Flag Enciphered Arranged:

OST_RLNS	{Ynk!==Y	bg-aeq-s	hocressg
lyk-droo	qqd-lugr	zeeq-cvb	hrd-iaei
qq-pvoth	def!-Ooa	suemthda	guoae!!}

Images Arranged:

- Use Vigenère cipher and uncover the flag.

Each picture is labeled a quote, that spell out "I saw Michelangelo at work. He had passed his sixtieth year"

This is a quote by Blaise de Vigenere, which once googled, should reveal this was the creator of the Vigenère cipher (which will be used later).

Enciphered:
OST_RLNS{Ynk!==Ybg-aeq-shocressglyk-drooqqd-lugrzeeq-cvbhrd-iaeiqq-pvothdef!-Ooasuemthdaguoae!!}

After this, and knowing the Vigenere Cipher requires a password, the duality of man hint, will lead them to using this password once again to find the flag. The CSG_FLAG{ xxx } will appear, and seeing the CSG_FLAG should alert them that they now have the complete flag, and the entire thing is deciphered correctly.

Deciphered:

CSG_FLAG{Yay!==You-are-successfully-decoded-Vigenere-cipher-inside-pictures!-Conguraturations!!}

Here is an example web site to decode Vigenere cypher:

https://www.cs.du.edu/~snarayan/crypt/vigenere.html
