Category:

Network

Name:

N3: Silent signals

Message:

Description:

Something unusual is hidden in these packets.

The data looks ordinary, but appearances can be deceiving.

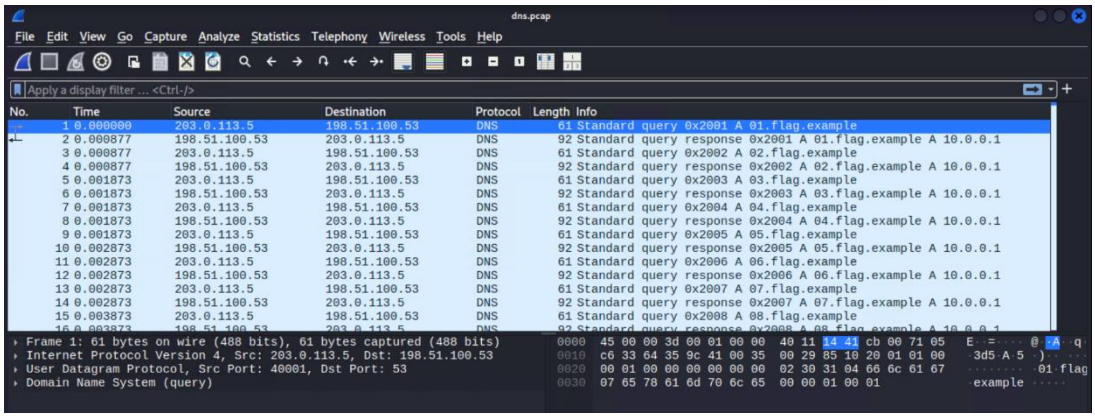

Analyze carefully, and you might uncover the secret.

Notes:

Flag format: CSG_FLAG{***flag***}

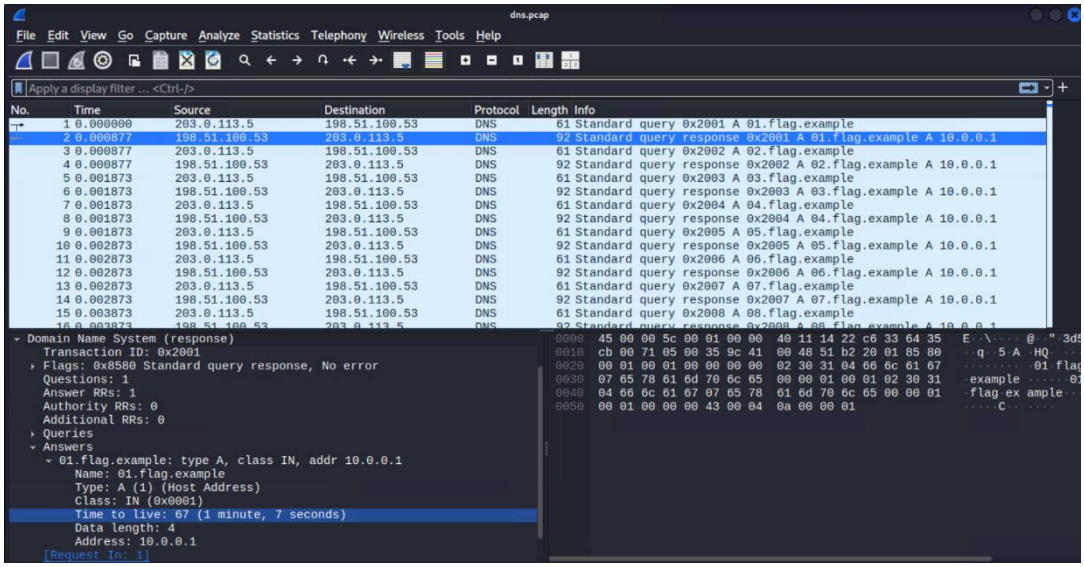

Instructions:

1. Open the dns.pcap by wireshark. Wireshark is pre-installed on the Kali attackbox.

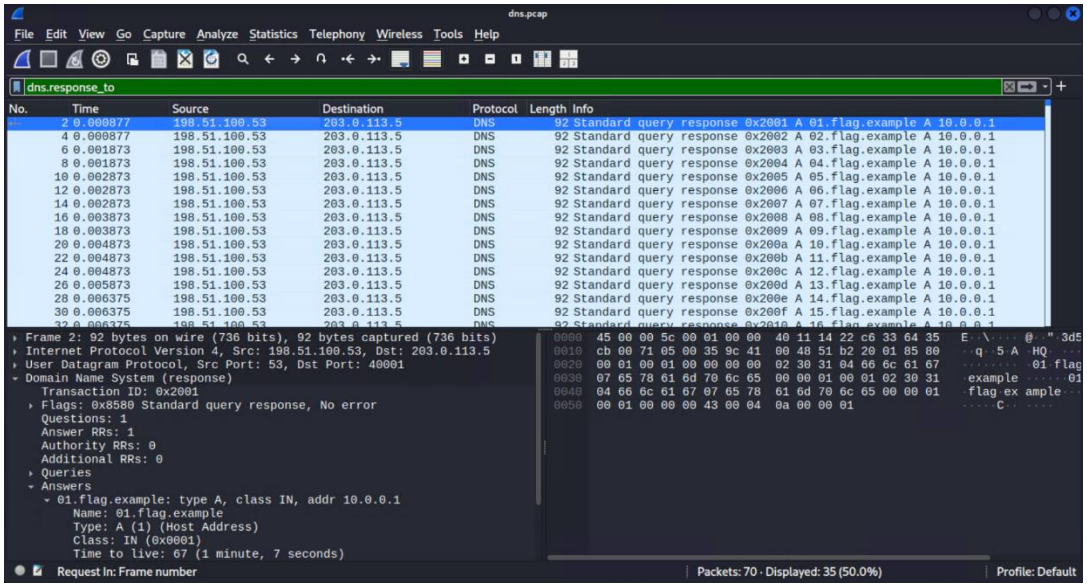

2. Multiple DNS queries to the same domain have been recorded.

3. Upon examining the DNS response content, the TTL is abnormally short.

4. Upon careful examination of other DNS responses, it appears that the TTL varies for each record.
5. The following filter displays only responses from DNS servers.

```
dns.response_to
```

6. Let's treat the TTL value as ASCII code and convert the first few packets.

Packet No.	2	4	6	8	10	12	14	16
TTL	67	83	71	95	70	76	65	71
ASCII	C	S	G	_	F	L	A	G

7. If you've confirmed this far, you should be able to see that the TTL of each DNS response indicates the ASCII code of the flag.
8.
