OSINT

Name:

Guess the geolocation

Message:

Please identify the location where this photo was taken and provide the geographic coordinates (latitude and longitude), rounded to three decimal places. Use standard rounding rules on the fourth decimal place to ensure accuracy of approximately 50 meters.

Example: if your answer is (12.3455, -12.3454), please input "CSG_FLAG{12.346,12.345}" as the flag. Do not include any space.

Instructions:

You can see two load signs with Japanese characters.
It shows "Abashiri 295km, Esashi 90km, Hamatonbetsu 61km", and route 238.

Japanese route 238 is located the northeast area in Hokkaido, Japan.
By locating "Hamatonbetsu", and "Abashiri", we can estimate the sign should be located at around 60km north-west from Hamatonbetsu. Near the "Cape Soya", the Northernmost Point of Japan.
Note that the stated distance is measured from the town's office. This is a generic rule in Japanese road signs. You could get more than 500m errors if you do not follow this rule.

Using Google Street view, you can see the road sign is located at the east side of Cape Soya.

Technical solution:
Asking for Microsoft Copilot for this condition like:
Please seek the point in Japan where 295km far from Abashiri City Hall, 90km from Esashi Town Office, 61km from Hamatonbetsu Town office, and the point is on the route 238. The distance is not a straight line, but along-the-road distance.

The answer is really near to the point.
Based on the detailed route data for **Japan National Route 238**, the point you're looking

*for—**295 km from Abashiri City Hall**, **90 km from Esashi Town Office**, and **61 km from Hamatonbetsu Town Office**, all measured along the road—is located near **Sōya Hill (宗谷丘陵)** in **Wakkanai City**, Hokkaido*.

Exact Coordinates of Cape Sōya:

- ***Latitude:** 45.5203° N*
- ***Longitude:** 141.9352° E*

If you give the photo into the AI, you may get another hint:

*There is a **gas station** with recognizable branding*

There is a Gas station eastside of Cape Soya.
Check there with Google Street Map (or other street view services), and you can soon find the point. 45.5219° N, 141.9387° E

Then the flag is: CSG_FLAG{45.522,141.939}
