Category:

OSINT

Name:

GitHub

Message:

While investigating a potentially malicious cryptocurrency project, we discovered a GitHub repository. Although it is no longer active, it might hold clues to the developer's identity. Could you help us to extract the hidden email address associated with this GitHub project?

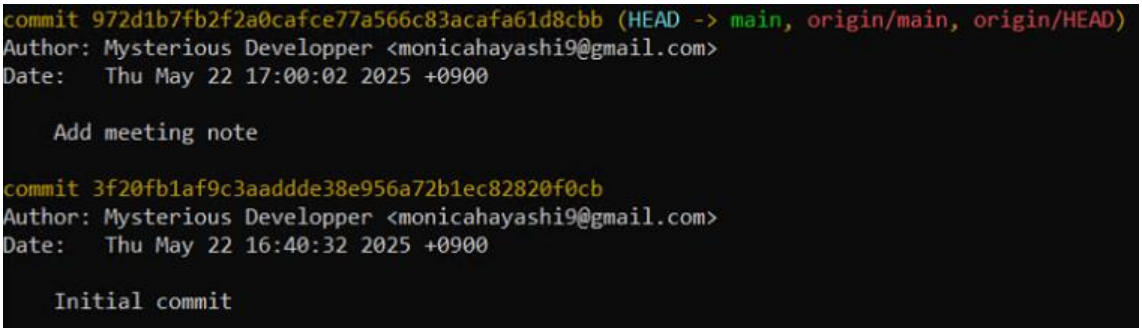

URL: https://github.com/MysteriousDevelopper

Hints:

- Moving beyond UI helps you get more information!

Instructions:

1. Navigate to the provided GitHub repository URL. Even if you click on a specific commit, you will not see details such as email address. This is because it was configured locally, which is typically not displayed directly on UI.
2. Clone this repository locally and examine the commit logs. Depending on how the committer configured their Git settings, the email address may be visible using the useful commands
    - git log
    - git show -s --format='%ae' <commit_sha>

Flag is:
